# C. BLS PHARMACOLOGY

#### 1. ACETAMINOPHEN

#### a) Indications

Patients ages 2 years and above judged to be in mild to moderate discomfort (e.g., 2–5 on FACES scale)

# b) Adverse Effects

Not clinically significant

#### c) Precautions

Administration of acetaminophen for mild to moderate pain does not eliminate the need for transport of the patient to the hospital to receive a comprehensive evaluation of the cause of the pain and appropriate definitive treatment.

#### d) Contraindications

- (1) Head Injury
- (2) Hypotension
- (3) Administration of acetaminophen or medications containing acetaminophen within the previous four hours

MANY COMMON COLD PREPARATIONS CONTAIN ACETAMINOPHEN.

- (4) Inability to swallow or take medications by mouth
- (5) Respiratory distress
- (6) Persistent vomiting
- (7) Known or suspected liver disease (including patients suspected of current alcohol ingestion)
- (8) Allergy to acetaminophen
- (9) Patients less than 2 years of age

#### e) Preparations Use Unit Dose Only

(DO NOT USE MULTIDOSE BOTTLE OF LIQUID)

Unit dose 160 mg/5 mL liquid Unit dose 325 mg pill or tablet

- (1) Less than 2 years of age: Not indicated
- (2) 2-4 years: Unit dose 160 mg/5 mL
- (3) 5–12 years: TWO unit doses of 160 mg/5 mL each for a total of 320 mg/10 mL
- (4) 13 years and above: FOUR unit doses of 160 mg/5 mL each for a total of 640 mg/20 mL OR in a form of 325 mg pill or tablet x2 for a total of 650 mg with sips of water as tolerated by the patient.

# 2. ACTIVATED CHARCOAL (WITHOUT SORBITOL)

## a) Indications

Poisoning by mouth

# b) Adverse Effects

May indirectly induce vomiting and cause nausea

# c) Precautions

Does not adsorb all drugs and toxic substances

# d) Contraindications

- (1) Altered mental status
- (2) Patients who have received an emetic

# e) Preparations

- (1) 25 grams/125 mL bottle
- (2) 50 grams/250 mL bottle

# Dosage

(1) Adult: Administer 1 gram/kg

(2) Pediatric: Administer 1 gram/kg

POISON INFORMATION CENTER RECOMMENDATIONS SHOULD BE SOLICITED IN CONJUNCTION WITH MEDICAL CONSULTATION, BUT MEDICATION ORDERS CAN ONLY BE ACCEPTED FROM AN APPROVED BASE STATION OR CONSULTATION CENTER.

# ALBUTEROL (PROVENTIL®, VENTOLIN®)

(Patient Prescribed, Patient Assisted)
(Also applies to other fast-acting bronchodilators)

## a) Indications

- (1) Signs and symptoms of respiratory distress
- (2) Bronchospasm/wheezing associated with:
  - (a) Asthma
  - (b) Chronic bronchitis
  - (c) Emphysema
  - (d) Allergic reactions (anaphylaxis)

## b) Adverse Effects

- (1) Tachycardia/palpitations
- (2) Hypertension
- (3) Angina
- (4) Nervousness/anxiety
- (5) Tremors
- (6) Dizziness
- (7) Headache
- (8) Sweating
- (9) Nausea/vomiting
- (10) Sore throat

# c) Precautions

- (1) May cause severe bronchospasm from repeated excessive use.
- (2) Patient must have their own physician-prescribed hand-held aerosol inhaler.

# d) Contraindications

Inhaler not prescribed for the patient

# e) Preparations

Hand-held (unit dose) aerosol inhaler

- (1) Adult: Patient may receive a maximum of 2 doses (4 puffs) over a 30-minute period.
- (2) Pediatric: Patient may receive a maximum of 2 doses (4 puffs) over a 30-minute period.
- (3) Additional doses may be administered with medical consultation.

# a) Pharmacology

- (1) Platelet inhibitor
- (2) Anti-inflammatory

# b) Pharmacokinetics

Blocks platelet aggregation

# c) Indications

Suspected Acute Coronary Syndrome and/or ST Elevation MI (STEMI) (NEW '20)

# d) Contraindications

- (1) Known hypersensitivity.
- (2) Patients who receive a full dose (324 mg) of aspirin prior to EMS arrival. (NEW '20)

# e) Adverse Effects

- (1) Heartburn
- (2) Nausea and vomiting
- (3) Wheezing

# f) Precautions

GI bleeding and upset

# g) Dosage

(1) Adult: 324 mg or 325 mg chewed

(2) Pediatric: Not indicated

#### **OPTIONAL SUPPLEMENTAL PROGRAM**

# 5. EPINEPHRINE (1:1,000)

#### a) Indications

- (1) Moderate to severe allergic reaction with respiratory distress or mild allergic reaction with history of life-threatening allergic reaction
- (2) Patients with severe asthma

# b) Adverse Effects

- (1) Tachycardia/palpitations
- (2) Angina
- (3) Headache
- (4) Nausea/vomiting
- (5) Dizziness
- (6) Hypertension
- (7) Nervousness/Anxiety
- (8) Tremors

#### c) Precautions

Medical consultation must be obtained before administering the EMS service's manual epinephrine or EMS service's auto-injector to cardiac (pediatric and adult), pregnant, and adult patients. However, medical consultation is not required for severe allergic reactions with respiratory distress.

#### d) Contraindications

None in the presence of anaphylaxis

#### e) Preparations

**Epinephrine** 

(Patient prescribed or EMS supplied)

- (1) Vial: 1 mg in 1 mL (1:1,000)
- (2) Preloaded Syringe
  - (a) Adult: 0.5 mg in 0.5 mL
  - (b) Pediatric: 0.15 mg in 0.15 mL

CONSIDER MEDICAL CONSULTATION FOR PATIENTS WITH CARDIAC HISTORY.

#### f) Dosage

(1) Patients 5 years of age or greater:

Adult: 0.5 mg in 0.5 mL IM

(2) Patients less than 5 years of age:

Pediatric: 0.15 mg in 0.15 mL IM

Additional doses may be administered with medical consultation.

#### 6. EPINEPHRINE AUTO-INJECTOR

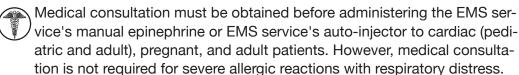

#### a) Indications

- (1) Moderate to severe allergic reaction with respiratory distress or mild allergic reaction with history of life-threatening allergic reaction
- (2) Patients with severe asthma

# b) Adverse Effects

- (1) Tachycardia/palpitations
- (2) Angina
- (3) Headache
- (4) Nausea/vomiting
- (5) Dizziness
- (6) Hypertension
- (7) Nervousness/anxiety
- (8) Tremors

#### c) Precautions

#### d) Contraindications

None in the presence of anaphylaxis

#### e) Preparations

Epinephrine Auto-injector (single or multi-dose) only (Patient prescribed or EMS supplied)

(1) Adult: 0.3 mg(2) Pediatric: 0.15 mg

CONSIDER MEDICAL CONSULTATION FOR PATIENTS WITH CARDIAC HISTORY.

- (1) Less than 5 years of age: 0.15 mg IM in the lateral thigh via epinephrine auto-injector or manual administration 0.15 mg in 0.15 mL IM
- (2) 5 years and greater: administer 0.3 mg IM in the lateral thigh via epinephrine auto-injector or manual administration 0.5 mg in 0.5 mL IM
- (3) Additional doses may be administered with medical consultation.

# NALOXONE (NARCAN®) PUBLIC SAFETY AND EMR

#### a) Pharmacology

Reverses all effects due to opioid (morphine-like) agents. This drug will reverse the respiratory depression and all central and peripheral nervous system effects.

#### b) Pharmacokinetics

- (1) Onset of action is within a few minutes with intranasal (IN) administration.
- (2) Patients responding to naloxone may require additional doses and transportation to the hospital since most opioids/narcotics last longer than naloxone.
- (3) Has no effect in the absence of opioid/narcotic.

# c) Indications

To reverse respiratory depression induced by opioid/narcotic agent.

#### d) Contraindications

Patients under 28 days of age

#### e) Adverse Effects

Opioid withdrawal

# f) Precautions

- Naloxone may induce opiate withdrawal in patients who are physically dependent on opioids.
- (2) Certain drugs may require much higher doses of naloxone for reversal than are currently used.
- (3) Should be administered and titrated so respiratory efforts return, but not intended to restore full consciousness.
- (4) Intranasal naloxone must be administered via nasal atomizer.
- (5) Naloxone has a duration of action of 40 minutes; the effect of the opioid/narcotic may last longer than naloxone and patients should be encouraged to be transported.

CLINICIANS MUST CONTACT A BASE STATION PHYSICIAN FOR PATIENTS WISHING TO REFUSE TRANSPORT AFTER BLS ADMINISTRATION OF NALOXONE.

# g) Dosage

- Adult: Administer 2 mg IN, dividing administration of the dose equally between the nares to a maximum of 1 mL per nare, OR administer 4 mg/0.1 mL IN in one nare.
- (2) Pediatric (child aged 28 days to adult): Administer 2 mg IN, dividing administration of the dose equally between the nares to a maximum of 1 mL per nare, **OR** administer 4 mg/0.1 mL IN in one nare.
- (3) Repeat as necessary to maintain respiratory activity.

## 8. NITROGLYCERIN

(Patient Prescribed, Patient Assisted)

# a) Indications

- (1) Patient must have own prescribed sublingual nitroglycerin.
- (2) Chest pain

# b) Adverse Effects

- (1) Hypotension
- (2) Headache
- (3) Dizziness
- (4) Tachycardia

## c) Precautions

- (1) Reassess blood pressure before and after administration.
- (2) If systolic blood pressure drops more than 20 mmHg, obtain medical consultation before further administration.

# d) Contraindications

- (1) Blood pressure below 90 mmHg systolic
- (2) Heart rate less than 60
- (3) Medication not prescribed for the patient
- (4) Pediatric patient under age 13
- (5) Any patient having taken medication for Pulmonary Artery Hypertension (e.g., Adcirca® or Revatio®) or erectile dysfunction (e.g., Viagra®, Levitra®, or Cialis®) within the past 48 hours. Medical consultation is required to override this contraindication.

# e) Preparations

Spray or tablet

- (1) Adult: One tablet or one spray sublingually
  - (a) Repeat in 3 to 5 minutes if chest pain persists
  - (b) Maximum of three doses (a combination of patient-administered and EMT-administered) of nitroglycerin
- (2) Pediatric: (nitroglycerin contraindicated for children under age 13)
- (3) Additional doses may be administered with medical consultation.

## 9. ORAL GLUCOSE

# a) Indications

- (1) Altered mental status with known diabetic history
- (2) Unconscious for an unknown reason

## b) Adverse Effects

Not clinically significant

# c) Precautions

Patient without gag reflex may aspirate.

# d) Contraindications

Not clinically significant

# e) Preparations

10–15 grams of glucose (contained in 24, 30, or 37.5 gram tube)

- (1) Adult: Administer 10–15 grams of glucose paste between the gum and cheek. Consider single additional dose of glucose paste if not improved after 10 minutes.
- (2) Pediatric: Administer 10–15 grams of glucose paste between the gum and cheek; this may be accomplished through several small administrations. Consider single additional dose of glucose paste if not improved after 10 minutes.

#### 10. OXYGEN

# a) Pharmacology

- (1) Increases oxygen content of the blood
- (2) Improves tissue oxygenation
- (3) Decreases energy expended for respirations

#### b) Pharmacokinetics

Changing the percentage of inspired oxygen results in an increased blood and tissue level equilibration within 5–20 minutes.

#### c) Indications

- (1) If evidence of hypoxia (Less than 94% SpO<sub>2</sub>)
- (2) Respiratory distress
- (3) Cardiopulmonary arrest
- (4) Trauma
- (5) Suspected CO exposure
- (6) Dyspnea

## d) Contraindications

Not clinically significant

# e) Adverse Effects

High concentrations of oxygen will reduce the respiratory drive in some COPD patients; these patients should be carefully monitored.

### f) Precautions

- (1) Never withhold oxygen from those who need it.
- (2) Oxygen should be given with caution to patients with COPD.
- (3) Simple or partial rebreather face masks must be supplied with a minimum 6 lpm.
- (4) Non-breather (NRB) face masks must be supplied with a minimum 12 lpm.

# g) Dosage

- (1) Adult: Administer 12–15 lpm via NRB mask or 2–6 lpm via nasal cannula, as needed. CO exposure: Administer 100% oxygen via NRB mask. Maintain SpO<sub>2</sub> at 100%
- (2) Pediatric: Administer 12–15 lpm via NRB mask or 2-6 lpm via nasal cannula, as needed. CO exposure: Administer 100% oxygen via NRB mask. Maintain SpO<sub>2</sub> at 100%

Percent O2 Saturation	Ranges	General Patient Care
94–100%	Normal	Give oxygen as necessary
91–93%	Mild Hypoxia	Give oxygen as necessary
86–90%	Moderate Hy- poxia	Give 100% oxygen Assisting Ventilations if necessary
less than or equal to 85%	Severe Hypoxia	Give 100% oxygen Assist Ventilations If indicated, Intubate

INACCURATE OR MISLEADING SpO<sub>2</sub> READINGS MAY OCCUR IN THE FOLLOWING PATIENTS: HYPOTHERMIC, HYPOPERFUSION (SHOCK), CO POISONING, HEMOGLOBIN ABNORMALITY, ANEMIA, AND VASOCONSTRICTION.
